INDUSTRY-LEADING WILDFIRE DEFENSE BACKED BY SCIENCE AND SAFETY

Who We Are

Proactive Wildfire Armor is a dedicated wildfire-mitigation company committed to protecting homes, families, and communities before disaster strikes. We combine proven exterior wildfire defense sprinkler systems to reduce risk and give homeowners true peace of mind. Our mission is simple: deliver reliable, science-backed wildfire protection that stands ready when every second counts.

Our Solution

The Proactive Wildfire Armor System creates a protective buffer around your property using a proven fire inhibitor for wildfire defense. A self-contained system deployed through roof- and ground-mounted sprinkler heads, the system is designed to:

Stop the advance of fire

Create a non-toxic chemical fire break around your property

Block ember ignition

Provide reliable, repeatable protection during wildfire events

PROACTIVE
WILDFIRE ARMOR

Why Our Fire inhibitor is Different?

What is a fire Inhibitor?

Our fire inhibitor is *non-toxic*. It is EPA Safer Choice-certified formula proven to stop the spread of fire, block ember ignition, and create a safe buffer around homes and properties.

Proven Protection - EPA Safer Choice and UL GREENGUARD Gold certified, with a patent-protected formula that stops the spread of fire.

Long-Lasting Defense - Works for months at a time, staying effective through weather until heavy rain naturally washes it away.

Safe for Everyone - Non-toxic and eco-friendly - safe for families, pets, and the environment indoors or outdoors.

How Fire Works?

BREAKING THE CYCLE

Our Fire Inhibitor unique barrier BLOCKS OXYGEN at the surface, stopping ignition and BREAKING the fire's chain reaction for months.

See the key differences at a glance - why our system is the **clear winner**

KEY DIFFERENCES

✓ Our System

VS

✗ Other Systems

Apply once ahead of season; protects for months when dry

Duration of Protection

Foams 30–60 min; gels 2–4 hours, only while wet

Independent system with own tank; works during outages

Utility Independence

Fails when water/power are cut; pool levels vary

EPA Safer Choice certified; non-toxic formulation

Environmental Safety

Often include phosphates/VOCs; residue concerns

No mixing; stays suspended; simple, reliable

Ease of Use

Requires mixing/stirring; messy and hard to reapply

Timeline	Our Fire Inhibitor	Sprinklers or Pool Systems	Foams	Gels
DAY 0-1	 Applied once, begins working Independent system	 Active while water flows Fails when utilities cut	 30-60 minutes Then breakdowns	 2-4 hours Less in heat/wind
DAY 2-3	 Still active after drying Full protection continues	 No Protection System offline	 No Protection Completely dried out	 No Protection Effectiveness gone
DAY 7	 Property remains protected	 No Protection	 No Protection	 No Protection
DAY 14	 Property remains protected	 No Protection	 No Protection	 No Protection
DAY 24	 Still protecting at fire's end Never had a loss	 No Protection	 No Protection	 No Protection
DAY 30+	 Up to 3 months protection Until rain/wash off	 No Protection	 No Protection	 No Protection
Full Protection Limited/Temporary No Protection				

SYSTEM OVERVIEW

KEY COMPONENTS AND LAYOUT FOR PROTECTION

Our wildfire defense systems are installed with care to protect your home without changing its appearance. We discreetly place components, so your property keeps its natural beauty. All while gaining powerful, long-lasting wildfire protection.

What is it?

Our Fire Inhibitor

A New Standard in Wildfire Defense

Our fire inhibitor is the world's first wildfire protection product to earn the EPA Safer Choice® certification. Made from all-natural, food-grade ingredients, it creates an invisible barrier that stops flames, resists embers, and keeps working for months.

HOW IT WORKS

Smart Science, Simple Protection

APPLY

Fire Inhibitor sprayed on vegetation, wood, and structures with our installed systems.

BOND

The solution dries clear, bonding at the molecular level to surfaces.

DEFEND

Stops flames, resists embers, and reduces smoke until rain naturally washes it away.

WHY IT MATTERS?

Protection That Fits Your Life

Non-toxic, food-grade, UL GreenGuard Gold certified.

Protects for 3–4 months, even when dry.

Uses up to 90% less water than traditional methods.

Safe for soil, plants, and wildlife.

REAL-WORLD PROOF

Have Our Fire Inhibitor Protect Your Home

Professional Installation Installed wildfire defense systems with remote activation.

TALK TO A SPECIALIST

YOUR PATH TO PROTECTION

STEP 1

DISCOVERY

- Homeowner Informational Packet -YOU ARE HERE NOW... soft proposal is being generated

STEP 2

PROFESSIONAL WILDFIRE MITIGATION DESIGN

- Detailed property assessment.
- Customized system design based on vegetation, terrain, and exposure
- Review of recommended tank, pump, and sprinkler layout

STEP 3

SIGN AGREEMENT

- Approve this proposal to confirm your intent to move forward

STEP 4

SITE EVALUATION

- Risk assessment professional visits your property
- Walkthrough to verify scope, finalize layout, and review options

STEP 5

SECURE YOUR INSTALLATION DATE

- Submit 10% deposit
- Your project is placed on the installation schedule

STEP 6

PROFESSIONAL INSTALLATION

Certified crews complete installation of tank, pump, piping, and sprinklers
Typical install: [2-5 days]

STEP 7

SYSTEM ACTIVATION & TRAINING

- System tested and activated
- Mobile app connected and demonstrated
- Walkthrough of maintenance and homeowner training

CERTIFICATIONS AND SAFETY

EPA Safer Choice

The only fire inhibitor in the U.S. to earn the EPA's Safer Choice designation.

- Meets the EPA's strictest criteria for human and environmental safety
- Uses food-grade ingredients with no harmful additives
- Recognized by an independent government agency, not just internal testing

UL GREENGUARD Gold

UL GREENGUARD Gold certified for low chemical emissions.

- Safe for indoor and outdoor use
- Protects indoor air quality
- One of the highest health and safety standards in the world

Patent-Protected Technology

Our patented formula is proven safe and effective.

- Cannot be replicated by competitors
- Backed by years of testing, research, and field use

Environmental Leadership

Unlike foams or gels that only work while wet, this fire inhibitor provides **months of protection when dry and is:**

- Harmless to pets, people, plants, and water sources
- Naturally washed off by heavy rain, leaving no toxic residue
- A sustainable alternative to toxic conventional retardants

What This Means For You

Confidence your system is backed by the highest safety standards

Peace of mind knowing it's family- and pet-safe

Proven technology to give you peace of mind all year round

1

How visible will the system be on my home?

We design installations to minimize visibility by routing piping along clean lines or inside crawl spaces. Tank and pump covers or custom enclosures are also available.

2

Where will the tank be placed?

Placement is flexible and typically near existing utilities. The exact location is confirmed during your site evaluation.

3

Will my system work if there's no cell service or power?

Yes. The system includes a **manual backup switch** for on-site activation. With optional backup power, it remains independent of city water and utilities during outages.

4

How long does our fire inhibitor protection last?

Our fire inhibitor is effective even after it dries and protects for months. Its effectiveness only diminishes after heavy rain, at which point a refill is recommended.

5

Is our fire inhibitor safe for my family, pets, and landscaping?

Yes, our fire inhibitor is **EPA Safer Choice** and **UL GREENGUARD Gold certified**, making it safe for people, pets, plants, and the environment.

6

How long does installation take?

Most projects are completed in just a few days, depending on property size and scope.

7

Has this system ever been used in a wildfire?

Yes. Our systems have been deployed during wildfire events, helping reduce ember ignition and supporting property protection.

8

How does our fire inhibitor work?

Our fire inhibitor is sprayed on surfaces where it bonds at the molecular level. By limiting oxygen in the fire tetrahedron, it keeps flames from taking hold and helps defend your home from ignition.
